1. General Description

LM270WR9 is a color active matrix liquid crystal display with a Light Emitting Diode(LED) backlight assembly without LED driver. The matrix employs oxide thin film transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 27 inch diagonally measured active display area with UHD resolution(3840 horizontal by 2160 vertical pixel array). Each pixel is divided into red, green and blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot, thus, presenting a palette of more than 1.07 Billion colors with A-FRC (Advanced Frame Rate Control). It has been designed to apply eDP(HBR2, 5.4Gbps) interface. It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

	Vertical Front Porch	tVFP	3	3	3	tHP	

Notes:

- 1) The value of Hsync Period, Hsync Width and Hsync valid should be even number times of tCLK. If the value is odd number times of tCLK, it can make asynchronous signal timing and cause abnormal display.
- 2) The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 3) The value of Hsync Period, Hsync Width, and Horizontal Back Porch should be divided by 4 without a remainder.
- 4) The polarity of Hsync, Vsync is not restricted.

 The violation of power sequence can cause a significant trouble in display and reliability.
- Please avoid floating state of interface signal during signal invalid period.
- When the interface signal is invalid, be sure to pull down the V_{LCD} (0V)
- Please turn off the power supply for LED when the level of V_{LCD} changes to prevent noise issue.
- Link training duration is dependent on the customer's system.
- It includes Source Frame Synchronization time.
 - Source Frame Synchronization: Time to prepare before Tx(Source) sends valid data(Invalid period).

3-7. Power Dip Condition

FIG.3-3 Power Dip Condition

For proper operation, stable power supply of V_{LCD} is necessary and power dip is allowed only in below condition. Except this condition, power on/off should follow power sequence specification exactly.

- 1) **Contrast Ratio(CR)** is defined mathematically as: **(By PR880)**
 It is measured at center point(1)

$$\text{Contrast ratio} = \frac{\text{Surface luminance with all white pixels}}{\text{Surface luminance with all black pixels}}$$

- 2) **Surface Luminance(L_{WH})** is the luminance value at center 1 point(1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG.4-1. **(By PR880)**

- 3) The **Variation in Surface Luminance**, δ_{WHITE} is defined as: **(By PR880)**

$$\delta_{\text{WHITE}} = \frac{\text{Minimum}(LP_1, LP_2, \dots, LP_9)}{\text{Maximum}(LP_1, LP_2, \dots, LP_9)} \times 100(\%)$$

Where L1 to L9 are the luminance with all pixels displaying white at 9 locations.

Product Specification**9. Precautions**

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- 1) You must mount a module using holes arranged in rear side.
- 2) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- 3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- 4) You should adopt radiation structure to satisfy the temperature specification.
- 5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- 6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.
(Some cosmetics are detrimental to the polarizer.)
- 7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- 8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- 9) Do not open the case because inside circuits do not have sufficient strength.
- 10) System frame should not have an interference with panel which can cause LC Leakage/Panel Crack due to the contraction of system frame at low temperature condition or panel damage by any other circumstances.

9-2. Operating Precautions

- 1) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- 2) Brightness depends on the temperature.(In higher temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- 3) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- 4) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- 5) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- 6) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- 7) A screw which is fastened up the steels should be a machine screw.(if not, it causes metallic foreign material and deal LCM a fatal blow)
- 8) Please do not set LCD on its edge.
- 9) When LCMs are used for public display, defects such as Yogore & image sticking can not be guaranteed.
- 10) LCMs cannot support "Interlaced Scan Method"
- 11) When this reverse model is used as a forward-type model (PCB on top side) or a Portrait-type mode at storage and operation, LGD can not guarantee any defects of LCM.
- 12) Please conduct image sticking test after 2-hour aging with Rolling Pattern at normal temperature.(25~40°C)

Product Specification**9-3. Electrostatic Discharge Control**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions For Strong Light and Hazardous Materials Exposure

Strong light exposure causes degradation of polarizer and color filter.
The LCM should be avoided direct contact with hazardous materials such as sulfur, acetic acid, chlorine, etc. These materials may cause chemical reaction such as sulfurization, corrosion, discoloration, etc.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- 1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- 2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. Handling Precautions For Protection Film

- 1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- 2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- 3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
