# **General Specifications**

|                               | Feature                         | Spec                   |  |
|-------------------------------|---------------------------------|------------------------|--|
|                               | Size                            | 7 inch                 |  |
|                               | Resolution                      | 800(RGB) x 480         |  |
|                               | Interface                       | RGB 24 bits with TCON  |  |
|                               | Color Depth                     | 16.7M                  |  |
|                               | Technology Type                 | a-Si                   |  |
| Display Spec.                 | Pixel Pitch (mm)                | 0.1926 (H) x 0.1790(V) |  |
|                               | Pixel Configuration             | R.G.B. Vertical Stripe |  |
|                               | Display Mode                    | TM with Normally White |  |
|                               | Surface Treatment(Up Polarizer) | Anti Glare             |  |
|                               | Viewing Direction               | 12 o'clock             |  |
|                               | Gray Scale Inversion Direction  | 6 o'clock              |  |
|                               | LCM (W x H x D) (mm)            | 164.9x 100.0 x 5.7     |  |
| Mechanical<br>Characteristics | Active Area(mm)                 | 154.08 (W) x 85.92 (H) |  |
|                               | With /Without TSP               | Without TSP            |  |
|                               | Weight (g)                      | 160 g                  |  |
|                               | LED Numbers                     | 18 LEDs                |  |

Note 1: Viewing direction for best image quality is different from TFT definition. There is a 180 degree shift.

Note 2: Requirements on Environmental Protection: RoHS

Note 3: LCM weight tolerance: +/- 5%

| 30         | R5     |     | RED data                                |   |
| 31         | R4     | I   | RED data                                |   |
| 32         | R3     |     | RED data                                |   |
| 33         | R2     | I   | RED data                                |   |
| 34         | R1     | I   | RED data                                | When input 18 bits RGB data,<br>R1 must be grounded                                 |
| 35         | R0     | I   | RED data(LSB)                           | When input 18 bits RGB data,  |

|    |       |   |  | R0 must be grounded   |
|----|-------|---|--|---|
| 36 | GND   | Р | Power ground   |   |
| 37 | DCLK  | I | Sample clock   | Data shall be latched at the falling edge of DCLK   |
| 38 | GND   | I | Power ground   |   |
| 39 | L/R   | I | Left/right selection                                   | Selection of scanning mode  |
| 40 | U/D   | I | Up/down selection                                      | Selection of scanning mode  |
| 41 | VGH   | Р | Gate on voltage  |   |
| 42 | VGL   | Р | Gate off voltage                                       |   |
| 43 | AVDD  | Р | Power for analog circuit                               |   |
| 44 | RESET | I | Global reset pin                                       | Active low to enter reset state, suggest to connect with an RC reset circuit for stability.  Normally pull high |
| 45 | NC    | N | No connection  |   |
| 46 | NC    | N | No connection  |   |
| 47 | DITHB | I | Dithering function enable control, normally pull high; | When DITHB=1,disable internal dithering function; When DITHB=0, enable internal dithering function;             |
| 48 | GND   | Р | Power ground   |   |
| 49 | NC    | N | No connection  |   |
| 50 | NC.   | N | No connection  |   |

Note: I/O definition.

I---Input pin, O---Output pin, P--- Power/Ground, N--- No Connection

#### 2.2 U/D R/L Function Description

| Scan Con | trol Input | Scanning Direction        |  |  |
|----------|------------|---------------------------|--|--|
| UPDN     | SHLR       | Scanning Direction        |  |  |
| GND      | DVDD       | Up to Down, Left to Right |  |  |
| DVDD     | GND        | Down to Up, Right to Left |  |  |
| GND      | GND        | Up to Down, Right to Left |  |  |
| DVDD     | DVDD       | Down to Up, Left to Right |  |  |

Model No:TM070RDH13-40

# 3 Absolute Maximum Ratings

AGND= GND=0V, Ta =  $25^{\circ}$ C

| Item                      | Symbol           | Min    | Max  | Unit       | Remark       |
|---------------------------|------------------|--------|------|------------|--------------|
|                           | DVDD             | -0.5   | 5.0  | V          |              |
| Power Voltage             | AVDD             | -0.5   | 13.5 | V          |              |

## 4.2 Recommended Driving Condition for Backlight

Ta=25℃

| Item                | Symbol         | Min    | Тур | Max  | Unit | Remark           |
|---------------------|----------------|--------|-----|------|------|------------------|
| Forward Current     | I <sub>F</sub> | -      | 120 | 200  | mA   | 18 LEDs          |
| Forward Voltage     | V <sub>F</sub> | 8.7    | 9.6 | 10.5 | V    | (3 LED Serial, 6 |
| Operating Life Time | -              | 20,000 | -   | -    | Hrs  | LED Parallel)    |

Note1: The LED driving condition is defined for each module (3 LED Serial, 6 LED Parallel).

Note2: Under LCM operating, the stable forward current should be inputted. And forward voltage is for reference only.

Note3: I<sub>F</sub> is defined for six channel LED. Optical performance should be evaluated at Ta=25°C, When LED is driven by high current, high ambient temperature & humidity condition. The life time of LED will be reduced. Operating life means brightness goes down to 50% initial brightness. Typical operating life time is estimated data.

Note4: The LED driving condition is defined for each LED module.

#### **Test Conditions:**

- 1.  $I_F=120$  mA,  $V_F=9.6$  V and the ambient temperature is 25 °C.
- 2. The test systems refer to Note 1 and Note 2.

Note 1: Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 5 Minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

| Item           | Photo detector | Field |
|----------------|----------------|-------|
| Contrast Ratio |                |       |
| Luminance      | BM-5A          | 1°    |
| Lum Uniformity |                |       |
| Chromaticity   | SR-3A          |       |
| Response Time  | TRD100         | -     |

Note 2: Definition of viewing angle range and measurement system.

viewing angle is measured at the center point of the LCD by CONOSCOPE(ergo-80).

Note 3: Definition of contrast ratio

Luminance measured when LCD is on the "White" state Contrast ratio (CR) = Luminance measured when LCD is on the "Black" state

"White state ": The state is that the LCD should drive by Vwhite.

"Black state": The state is that the LCD should drive by Vblack.

Vwhite: To be determined Vblack: To be determined.

Note 4: Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T<sub>ON</sub>) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T<sub>OFF</sub>) is the time between photo detector output intensity changed from 10% to 90%.

Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of LCD.

Note 6: Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (U) = Lmin/Lmax

L-----Active area length W----- Active area width

Lmax: The measured Maximum luminance of all measurement position.

Lmin: The measured Minimum luminance of all measurement position.

Note 7: Definition of Luminance:

Measure the luminance of white state at center point.

## **Precautions for Use of LCD Modules**

## 10.1 Handling Precautions

- The display panel is made of glass. Do not subject it to a mechanical shock by 10.1.1 dropping it from a high place, etc.
- If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to varv.
- The polarizer covering the display surface of the LCD module is soft and easily 10.1.4 scratched. Handle this polarizer carefully.
- If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
  - Isopropyl alcohol
  - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents
- Do not attempt to disassemble the LCD Module. 10.1.6
- 10.1.7 If the logic circuit power is off, do not apply the input signals.
- 10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
  - 10.1.8.1 Be sure to ground the body when handling the LCD Modules.
  - 10.1.8.2 Tools required for assembly, such as soldering irons, must be properly ground.
- 10.1.8.3 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- 10.1.8.4 The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

#### 10.2 Storage precautions

- 10.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature :  $0^{\circ}$ C  $\sim 40^{\circ}$ C Relatively humidity: ≤80%

The LCD modules should be stored in the room without acid, alkali and harmful gas. 10.2.3

#### 10.3 Transportation Precautions

10.3.1 The LCD modules should be no falling and violent shocking during transportation, and

The information contained herein is the exclusive property of SHANGHAI AVIC OPTOELECTRONICS

Corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of SHANGHAI AVIC OPTOELECTRONICS Corporation.

also should avoid excessive press, water, damp and sunshine.

The information contained herein is the exclusive property of SHANGHAI AVIC OPTOELECTRONICS Corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of SHANGHAI AVIC OPTOELECTRONICS Corporation.
