1 General Specifications

	Feature	Spec		
	Size (inch)	18.5		
	Resolution	1920(RGB) x 1080		
Display Spec.	Technology Type	SFT		
	Pixel Configuration	R.G.B. Vertical Stripe		
	Pixel Pitch (mm)	0.213 x 0.213		
	Display Mode	Transmissive, Normally Black		
	Polarizer pencil-hardness	3H (min.) [by JIS K5600]		
	Surface Treatment (Up Polarizer)	Antiglare		
	Viewing Direction	-		
	Gray Scale Inversion Direction	-		
	Luminance (cd/m2)	400 Тур.		
Optical Characteristics	Contrast ratio	1000:1 Тур.		
	Color gamut (%)	72 Тур.		
	Response time Ton+Toff (ms)	25 Тур.		
	Viewing angle R/L/U/D (Degree)	88/88/88/88 Typ.		
	LCM (W x H x D) (mm)	430.4 x 254.6 x 13.5 Typ.		
Mashaniaal	Active Area (mm)	408.96 x 230.04		
Mechanical Characteristics	With /Without TSP	Without TSP		
	Weight (g)	(1550) Тур.		
	Backlight LED replacement	Not Available		
	Interface	eDP 2lines, 8bit		
	Power supply veltage (1/)	LCD panel: 5.0Typ.		
Electrical	Power supply voltage (V)	Backlight: (12.0)Typ.		
Characteristics	Color Depth	16.7M		
	Backlight LED driver	Build in.		
	Power consumption (W)	(15.3) Typ.		

Note 1: The 12 o'clock direction is upper side of outline in "8 Mechanical Drawing".

Note 2 : Requirements on Environmental Protection: Q/S0002

Note 3 : LCM weight max. tolerance : +10%

Note 4: Color gamut is against NTSC color space.

Note 5: Power consumption is defined at the maximum luminance control, with checkered flag pattern.

4 Electrical Characteristics

4.1 Driving TFT LCD Panel

						(Ta= 25°C)
Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Power supply voltage	VCC	4.5	5.0	5.5	V	-
Power supply current	ICC	-	420 Note1	820 Note2	mA	at VCC= 5.0V
Permissible ripple voltage	VRPC	-	-	100	mVp-p	for VCC Note3, Note4, Note5

Note1: Checkered flag pattern [by IEC 61747-6]

Note2: Pattern for maximum current

Note3: This product works if the ripple voltage levels are over the permissible values, but there might be noise on the display image.

Note4: The permissible ripple voltage includes spike noise.

Note5: The load variation influence does not include.

4.2 Driving Backlight

							(Ta= 25°C)	
Paramete	Parameter		min.	typ.	max.	Unit	Remarks	
Power supply voltage	ge	VDD	(10.8)	(12.0)	(13.2)	V	Note1	
Power supply curre	nt Note2	IDD	-	(1,100)	(1350) Note3	mA	at VDD= 12.0V Note4	
Permissible ripple v	oltage	VRPD	-	-	200	mVp-p	for VDD Note2, Note5, Note6	
Input voltage for	High	VDFH1	2.0	-	5.25	V		
PWM signal	Low	VDFL1	0	-	0.4	V		
Input voltage for	High	VDFH2	2.0	-	5.25	V		
BRTC signal	Low	VDFL2	0	-	0.8	V	No.4-7	
Input current for	High	IDFH1	-	-	200	μΑ	Note7	
PWM signal	Low	IDFL1	-200	-	-	μΑ		
Input current for	High	IDFH2	-	-	200	μΑ		
BRTC signal	High	IDFL2	-200	-	-	μΑ		
PWM freque	ncy	f _{PWM}	200	-	10k	Hz	Note8, Note9	
PWM duty r	atio	DR _{PWM}	1	-	100	%		
PWM pulse v	vidth	tPWH	5	-	-	μS	Note10, Note11	
LED life time		Hr	-	50000	-	Hour	Note 12	

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

Page 8 of 24

TM185VDSG06

Note1: When designing of the power supply, take the measures for the prevention of surge voltage.

Note2: The power supply lines (VDD and GND) may have ripple voltage during luminance control of LED. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on.

Note3: This value excludes peak current such as overshoot current.

Note4: At the maximum luminance control.

Note5: This product works if the ripple voltage levels are over the permissible values, but there might be noise on the display image.

Note6: The permissible ripple voltage includes spike noise.

Note7: See "4.3 BLOCK DIAGRAM".

Note8: A recommended fPWM value is as follows.

$$f_{\rm PWM} = \frac{2n-1}{4} \times fv$$

(n = integer, fv = frame frequency of LCD module)

Note9: Depending on the frequency used, some noise may appear on the screen, please conduct a thorough evaluation.

Note10: While the BRTC signal is high, do not set the tPWH (PWM pulse width) is less than minimum value. It may cause abnormal working of the backlight. In this case, turn the backlight off and then on again by BRTC signal.

Note11: Regardless of the PWM frequency, both PWM duty ratio and PWM pulse width must be always more than the minimum values.

Note12: Optical performance should be evaluated at Ta=25 °C. Only If LED is driven by high current, high ambient temperature & humidity condition. The life time of LED will be reduced. Operating life means brightness goes down to 50% of initial brightness. Typical operating life time is an estimated data.

TM185VDSG06

5.3 Power On/Off Sequence

Note1: If there is a voltage variation (voltage drop) at the rising edge of VCC below (4.5)V, there is a possibility that a product does not work due to a protection circuit.

Note2: Display signals (Lane0_P/N, Lane1_P/N) and function signals (AUX_CH_P/N, HPD) must be set to Low or High-impedance, except the VCC ON period (See above sequence diagram), in order to avoid the circuitry damage.

Note3: Depending on the setting of luminance control, it may cause display's flickering during the Power-On time.

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

 $\langle P \rangle$

Test Conditions:

- 1. The ambient temperature is 25±2℃.humidity is 65±7%. PWM duty ratio is 100%.
- 2. The test systems refer to Note 1 and Note 2.
- 3. Contrast Ratio, Chromaticity, Uniformity, and Luminance is measured by SR-UL, SR-3AR or equivalent.
- 4. Response Time is measured by TRD-100, LCD-5200 or equivalent.

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

Page 15 of 24

Note 1: Definition of optical measurement system.

TM185VDSG06

The optical characteristics should be measured in dark room. After 20 minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

Note 2: Definition of viewing angle range and measurement system.

Viewing angle is measured at the center point of the LCD by LCD5200.

The 12 o'clock direction is upper side of outline in "8 Mechanical Drawing".

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

Page 16 of 24

TM185VDSG06

Note 3: Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

Contrast ratio (CR) = Luminance of white screen Luminance of black screen

Note 4: Definition of Response time

The response time is defined as the LCD optical switching time interval between "Black" state and "White" state. Rise time (Ton) is the time between photo detector output intensity changed from 10% to 90%. And Fall time (Toff) is the time between photo detector output intensity changed from 90% to 10%.

Product surface temperature: TopF= 29°C.

Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of LCD.

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

Page 17 of 24

MTIANMA

TM185VDSG06

Note 6: Definition of Luminance Uniformity

The luminance uniformity is calculated by using following formula.

Luminance uniformity (LU)= Minimum luminance from ① to ⑤ Maximum luminance from ① to ⑤

The luminance is measured at near the 5 points shown below.

	320	960	1600
180	1		2
540			
900	4		5

Fig. 2 Definition of uniformity

Note 7: Definition of Luminance :

Measure the luminance of white state at center point.

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.

9 Packing Drawing

TM185VDSG06

Parameter	Inner packing box	Unit
Size	550(W) × 408(H) × 451(D) (typ.)	mm
Weight	(1.55) (typ.)	kg
Total weight	9.695(typ.) (with 5 products)	kg

10 Precautions For Use of LCD Modules

10.1 Handling Precautions

- 10.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 10.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

10.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

- 10.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
 - Isopropyl alcohol
 - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents
- 10.1.6 Do not attempt to disassemble the LCD Module.
- 10.1.7 If the logic circuit power is off, do not apply the input signals.
- 10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
- 10.1.8.1 Be sure to ground the body when handling the LCD Modules.
- 10.1.8.2 Tools required for assembly, such as soldering irons, must be properly ground.
- 10.1.8.3 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- 10.1.8.4 The LCD Module is coated with a film to protect the display surface. Be care when

Page 23 of 24

TM185VDSG06

peeling off this protective film since static electricity may be generated. **10.2 Storage Precautions**

10.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

10.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature : 0° C $\sim 40^{\circ}$ C Relatively humidity: $\leq 80\%$

10.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas. **10.3 Transportation Precautions**

The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.

The information contained herein is the exclusive property of Tianma Microelectronics Co., Ltd, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of Tianma Microelectronics Co., Ltd.
